

Utopia Font Prob- lem: Miss- ing Small Caps + Italic Vari- ant

HAFISCAL
BUILD
SYS-
TEM

1. INTRODUCTION

This minimal example demonstrates the font error that occurs in the QE submission build.

The problem: The `econsocart` document class defines subsections to use **small caps + italic** (`scit`) font variant, but Utopia font does not have this combination.

2. THE ERROR

When you compile this document with `pdflatex`, you will see:

LaTeX Error: Font T1/put/m/scit/12 not found.

This happens at the first subsection command:

2.1 *This Subsection Will Cause an Error*

The `econsocart` class tries to render this subsection title in small caps + italic, but Utopia font (family code `put`) does not have the `scit` variant defined.

2.2 *Another Failing Subsection*

Each subsection command will produce the same error.

3. WHY THIS HAPPENS

- Utopia font has these variants separately:
 - Normal: Regular text
 - Bold: **Bold text**
 - Italic: *Italic text*
